Experience

Rust Smart Contract Developer Intern

Youthspire.in | On-Site | May 2025 – June 2025

- Migrated NFT minting platform from Solidity/Ethereum to **Solana (Rust-based)**, improving contract execution speed, security, and reliability.
- Developed and deployed Rust smart contracts for NFT minting, ensuring seamless integration with existing DeFi and NFT protocols.
- Contributed to contract tooling, error handling, and build pipelines for a more robust production-grade deployment setup.

Web3 Full Stack Developer Intern

Zeru.Finance | Remote | July 2025 – September 2025

- **Indexed and integrated** multiple DeFi data sources into a unified API layer by designing and deploying subgraphs using **The Graph Protocol** (GraphQL, AssemblyScript), covering token metrics, restaking events, and AVS strategies.
- Developed a **secure admin routing layer** in Rust to enhance backend access control and protect sensitive endpoints in the platform.
- Engineered smart contract data extraction pipelines for **EVM-compatible chains**, integrating **EigenLayer restaking events** and strategy metadata into a structured API format.

Projects

ChessChain

- Built a Web3 chess platform enabling ETH staking and automated rewards via smart contracts.
- Reduced gas costs by 30%, onboarded 100+ testnet users, and managed 0.5 ETH in prototype tournaments.
- **Tech Stack:** Solidity, Ethereum, React.js, Ethers.js, ERC-20, gas optimization.
- View the full codebase on [GitHub](#) and try the deployed app [here](#).

StreamPay

- Built a Web3 subscription payments protocol enabling real-time, per-second ETH/USDC streaming.
- Automated recurring payments using Gelato and optimized gas costs for on-chain executions.
- Supports flexible subscription models (daily, weekly, monthly) with escrow-based security.
- **Tech Stack:** Solidity, Stylus (Rust on Arbitrum One), Gelato, Subgraphs (The Graph), IPFS, Hardhat, Typescript.
- View the full codebase on [GitHub](#) and deployed app [here](#).

Decentralised Youtube (work in progress)

- Currently building a censorship-resistant, Web3-native video platform powered by **IPFS** for decentralized storage and **smart contracts** for fair creator monetization.
- Actively optimizing video upload latency and exploring **The Graph** for real-time analytics.
- Focused on improving creator ownership, protocol sustainability, and user experience.
- **Tech Stack:** React.js, Solidity, IPFS, Ethers.js, Hardhat, The Graph (WIP), ERC-721, Ethereum

Skills

- **Blockchain:** Solidity, Ethereum, Smart Contracts, Web3.js, Hardhat, Ganache
- **Programming:** Rust, JavaScript, C++, Python
- **Frameworks/Libraries:** Node.js, Ethers.js, The Graph, Anchor, Express
- **Concepts:** Consensus Algorithms (PoW/PoS), Cryptography, DeFi, NFT Protocols
- **Tools:** Git, Linux, Kafka, Figma

Education

Rustamji Institute of Technology (RJIT), Gwalior

Bachelor of Technology in Information Technology | Expected Apr 2026

Relevant Coursework: Data Structures and Algorithms , Database Management Systems , Computer Networks

Achievements

- Honorable Mention – Major Impact, **Arbitrum Open House Online Hackathon** (Aug 2025)
Recognized among 6 standout projects out of hundreds of submissions. Awarded **\$1.5K Track Prize** for building **StreamPay**.
- **Avalanche Team1 India Hackathon** (Delhi, Sep 2025) winner .
Project shortlisted among **Top Projects**; invited to showcase at Avalanche conference in Goa (Nov 2025).
- NPTEL: Introduction to Machine Learning (IIT Kharagpur, ELITE tag)
- NPTEL: Programming in Modern C++ (IIT Madras)
